MMC TECHNICAL PROPOSAL KIT · EDITION 2.0

Win the tender on the paperwork, not on the price alone.

Thirteen fillable tender forms, a drawing-reading guide and a quantity take-off sheet that calculates itself — built for contractors who lose work to administrative rejection and arithmetic that does not reconcile.

Get the kit

13 TENDER FORMS	**222** LIVE EXCEL FORMULAS
9 WORK GROUPS MEASURED	**4** CURRENCIES

THE PROBLEM

Most lost tenders are lost before the price is opened

Technical evaluation is a scoring exercise with a gate in front of it. Contractors spend weeks on the price and an afternoon on the submission — then discover the gate was the whole competition.

⚠

Administrative rejection

An expired certificate, a missing bond reference, an unsigned page. The technical score never gets read, and nobody tells you why.

Numbers that do not reconcile

The cover letter says one figure, the BOQ another, the payment schedule implies a third. The evaluator queries it, and confidence in the whole offer drops.

Generic methodology

The same twelve pages submitted to every tender. Evaluators score it against the actual scope, and a document that could describe any project describes none.

THE SOLUTION

One kit, thirteen documents, one set of numbers

The quantity take-off feeds the price schedule; the price schedule feeds the payment ladder; the payment ladder has to be defensible from the BOQ groups. The kit is built so those links are arithmetic, not promises — and so the last review catches the inconsistency before the client does.

STEP 1

Measure

Take-off sheet: dimensions in, quantities out

STEP 2

Summarise

Nine work groups, subtotalled

STEP 3

Price

Rate per item, waste per material

STEP 4

Build up

Overhead, profit, tax

STEP 5

Distribute

Payment percentages per milestone

WHAT'S INSIDE

Every document a technical submission needs

01

Cover letter & compliance statement

Signed undertaking plus a twelve-line compliance matrix mapped to the tender requirements.

02

Scope understanding & methodology

Nine work packages, four execution gates, coordination and clash management.

03

Time schedule & payment ladder

Twelve-month bar chart, six milestones, payment percentages that follow the BOQ.

04

QA/QC plan

Twelve-point inspection and test plan with hold points, NCR procedure, KPI targets.

05

HSE plan

Ten critical hazards, PPE schedule, six permit types, emergency response.

06

Resource plan

Organisation chart, key personnel schedule, fourteen plant items, ten material sources.

07

Track record

Ten project slots, detail sheets, experience compliance against stated minimums.

08

Risk register

Fourteen risks with 5×5 matrix, trigger conditions, owners and contingencies.

09

BOQ & price schedule

Twenty-four items, waste per row, overhead and profit as separate lines.

10–13

Supporting forms

Tender checklist, RFI, deviations and value engineering, handover warranty.

G1

Drawing reading guide

Architectural, structural and MEP: symbols, bar schedules, risers, cross-checks.

G2

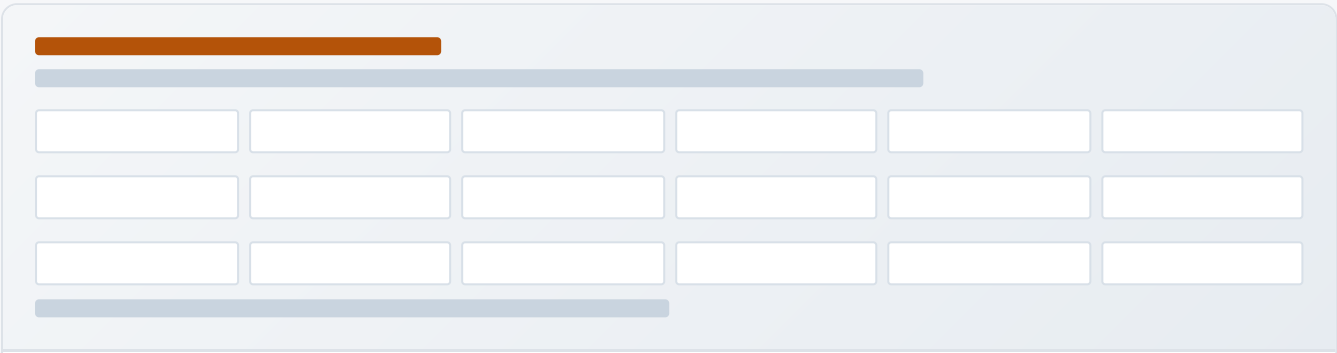

Usage guide

The order of work, how quantities link to prices, and a fifteen-point pre-submission review.

A LOOK INSIDE

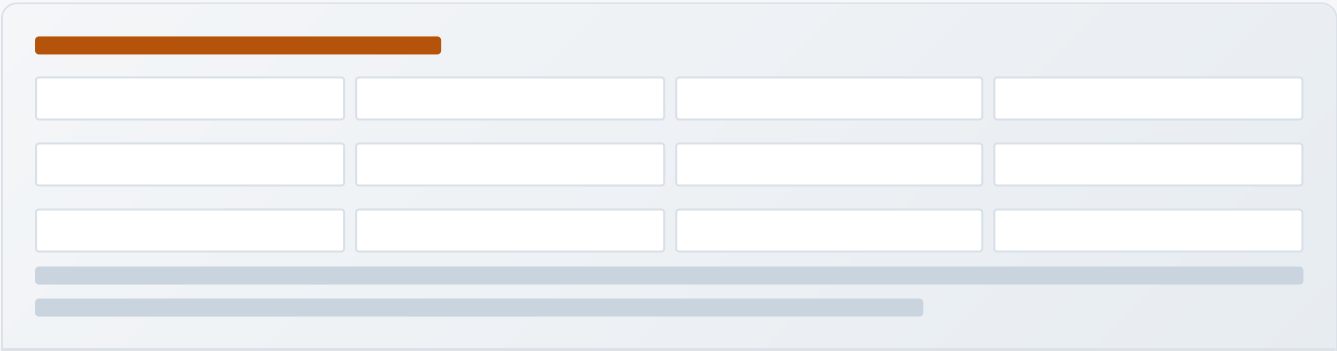

What the pages actually look like

Clean, print-first layouts. Every form is a page you could hand to a client without reformatting.

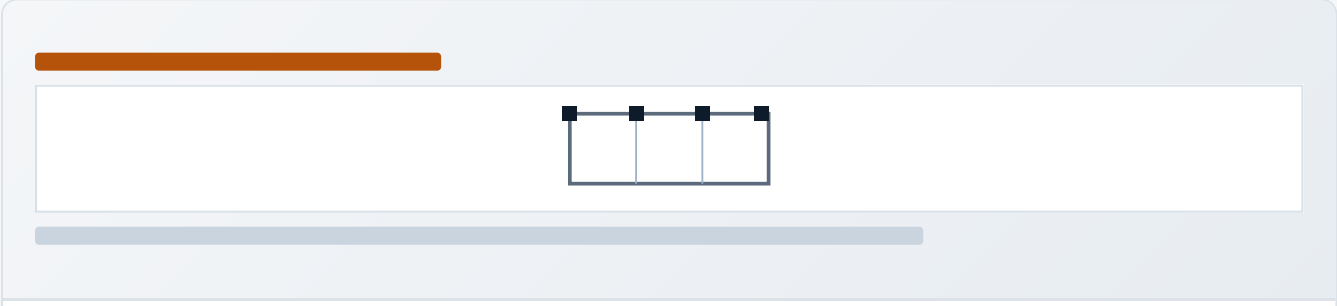

Bar chart & payment ladder

Fourteen activities across twelve months, six milestones.

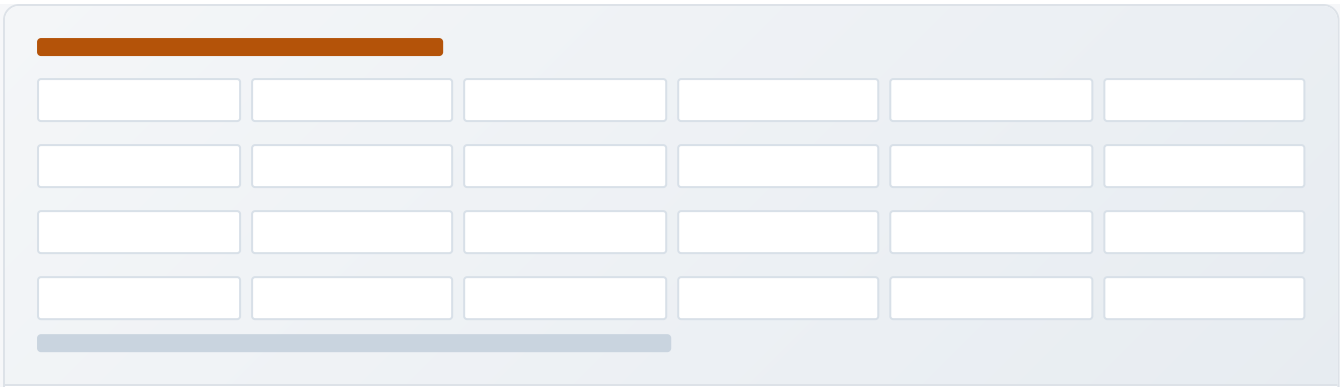

Price schedule

Twenty-four items with waste, overhead and profit as visible lines.

Drawing reading guide

Grid, sections, bar schedules and riser diagrams explained in sequence.

Quantity take-off

L × W × H × No., waste per material, totals that follow your edits.

WHAT USERS SAY

Feedback on the structure

These are **illustrative examples written for this prototype**, not real customer testimonials. They show the kind of feedback the kit is designed to earn.

ILLUSTRATIVE EXAMPLE

“The payment ladder was the part that changed how we bid. We used to invent the percentages; now they fall out of the BOQ and we can defend every one of them.”

Sample text

Contracts manager, building contractor

ILLUSTRATIVE EXAMPLE

“We stopped losing bids at the administrative stage. The checklist with an owner against every line is the least glamorous and most useful page in the pack.”

Sample text

Proposals lead, fit-out contractor

ILLUSTRATIVE EXAMPLE

“The take-off sheet made our reinforcement quantity traceable. When a client queries a figure we can point at the row, the drawing and the revision.”

Sample text

Chief estimator, civil contractor

QUESTIONS

The things contractors ask first

Do I need Excel, or is the browser enough? −

Either. The HTML forms calculate in the browser and print directly to PDF. The Excel workbook is for firms who want to keep the take-off as a working file and update dimensions later without reprinting the page.

Is the pricing in the examples real? +

Can I put my own logo on it? +

Does it work for Arabic submissions? +

What if a code changes and a form becomes out of date? +

Read all questions →

Bid like the paperwork is the competition

Because in a scored technical evaluation, it is. Open the preview, print one form, and see whether it is better than the one you are using now.

Subscribe to Professional | Compare plans

MMC Technical Proposal Kit

Fillable tender forms, drawing-reading guide and quantity take-off for contractors.

Prices shown in USD for illustration. Subscription tiers describe a proposed commercial model; the pages are a working front-end prototype and no payment is processed anywhere in this kit.

PRICING

Pick the tier that matches how often you bid

Every tier includes the full set of forms and both calculation sheets. The difference is editions, branding, seats and support — not the number of documents you are allowed to print.

Monthly | Annual 2 months free

Starter

For a contractor submitting a few tenders a year.

$39

per month

billed monthly

- ✓ All 13 tender forms (TP-01 to TP-13)
- ✓ Drawing reading guide (TP-G1)
- ✓ Quantity take-off sheet (TP-14)
- ✓ Print / save as PDF
- ✓ Autosave in the browser
- ✓ English edition
- ✓ 1 user, 3 active projects
- ✓ Email support, 3 business days
- — Excel workbook
- — Arabic edition
- — Your logo on the forms
- — Priority support

No card required to try the demo

MOST CHOSEN

Professional

For a firm bidding continuously across several packages.

$89

per month

billed monthly

- ✓ Everything in Starter, plus:
- ✓ Arabic and English editions
- ✓ Excel workbook with 222 live formulas
- ✓ Branded cover and header (your logo)
- ✓ 10 users, unlimited projects
- ✓ Quarterly code-change brief
- ✓ Email and chat support, 1 business day
- — Priority support

Choose Professional

No card required to try the demo

Enterprise

For multi-branch contractors and JV bid teams.

$199

per month

billed monthly

- ✓ Everything in Professional, plus:
- ✓ Unlimited users and branches
- ✓ Custom forms built to your tender format
- ✓ Your own BOQ structure and rate library
- ✓ Onboarding and training session
- ✓ Named account manager
- ✓ Priority support, 4-hour response

No card required to try the demo

WHY THESE THREE TIERS

The logic behind the ladder

Starter exists to remove the reason not to start. A contractor who bids three times a year will not pay professional prices, but they will pay the price of one printed form set to stop rebuilding the same cover letter from scratch. The seat limit and the single language keep it from cannibalising Professional without making it feel punitive.

Professional is the intended destination. The Arabic edition, the Excel workbook and your own logo on the forms are the three things a firm bidding continuously actually needs, and all three are invisible to a first-time buyer — which is why they are grouped rather than sold separately. Roughly two-thirds of revenue in a ladder like this should land on the middle tier; if it does not, either the middle is priced too close to the top or the top is not delivering enough.

Enterprise is priced for procurement, not for individuals. Custom forms, a rate library and a named manager are services, and services are bought by committee. The four-hour response commitment is the line that closes these deals — it is the only item on the page a branch manager cannot get internally.

Monthly versus annual

Annual billing at ten months' price is a 17% discount, which is generous but deliberate: it converts a subscription into a budget line, and a budget line survives the month a firm does not bid. Churn in contractor tools is seasonal — bids cluster around tender cycles — and annual billing is the only instrument that smooths it.

What is deliberately *not* metered

Projects, prints and downloads are unlimited on every paid tier. Metering those creates a reason to avoid using the product on the tender that matters most, which is precisely the tender that decides whether the subscription renews.

Positioning

This is priced as a *proposal-production tool*, not as estimating software. Estimating platforms cost ten times more and are bought by a different person. At these prices a single avoided administrative rejection pays for several years.

INCLUDED IN EVERY TIER

What you get regardless of plan

13

Tender forms

Cover letter through deviations schedule, each one printable and fillable.

G1

Drawing reading guide

Architectural, structural and MEP — symbols, schedules and the details where quantity errors happen.

14

Quantity take-off

Length, width, height, number, waste — with totals that recalculate as you type.

9

Work groups

Earthworks to MEP, each summarised and carried into the price schedule.

4

Currencies

USD, JOD, SAR and AED — switch the display without losing a single value you typed.

0

Installations

Runs in the browser. No plugin, no desktop install, no file format to learn.

QUESTIONS

Before you choose

Is this a subscription or a one-off purchase? −

Subscription. The forms are maintained — code editions change, currencies move, forms get corrected — and a subscription is what funds that maintenance.

Can I cancel? +

Do the forms work offline? +

What happens to my data? +

All questions →

Start with the tier you will actually use

Professional is the one most firms settle on: both editions, the Excel workbook and your own logo on every form.

How to read this table

Documents are cumulative: Enterprise includes everything in Professional, which includes everything in Starter. The highlighted column marks the tier most firms settle on — not because it is the middle option, but because the Arabic edition and the Excel workbook are the two items that change a bid from a printed form into a working file.

Starter

Occasional bidding, one language, one seat.

$39

per month

MOST CHOSEN

Professional

Continuous bidding, both editions, branding.

$89

per month

Choose Professional

Enterprise

Multi-branch, custom formats, named support.

$199

per month

FAQ

Everything contractors ask before subscribing

Grouped by topic. If something is missing, the Enterprise onboarding call exists to fill the gap.

Getting started

What exactly am I buying? −

A set of HTML documents that run in your browser: thirteen tender forms, two calculation sheets and two guides. They are fillable, printable and save your entries locally as you type. Professional and Enterprise also include the Excel version of the quantity take-off.

Do I need to install anything? +

Can I try it before paying? +

The forms and the numbers

Are the prices in the example real? +

How does the take-off stay consistent with the price schedule? +

Can I change the currency? +

I edited a dimension and the total did not change. +

Subscription and billing

Is it monthly or annual? +

Can I cancel? +

What happens if I move from Starter to Professional mid-term? +

Do you offer a discount for a single-project use? +

Data, privacy and offline use

Where is my data stored? +

Does it work offline? +

What if I clear my browser data? +

Editions and support

How complete is the Arabic edition? +

Can I put my company logo on the forms? +

Do you update the forms when codes change? +

Can you build forms to our own tender format? +

One honest caveat

This kit is a document system, not an estimating platform. It will produce a consistent, printable, internally reconciling technical submission. It will not tell you what a cubic metre of concrete costs in your city — that number comes from your suppliers, and the forms are built on the assumption that you will put it there yourself.

BILLING CYCLE

Monthly — billed each month

ANYTHING WE SHOULD KNOW?

Number of users, branches, whether you need the Arabic edition, tender format to match…

This is a demonstration form. No payment is taken, no card details are requested and no account is created. Nothing is sent anywhere — the confirmation below appears locally so you can see the intended behaviour. Connect it to your own CRM or billing provider before going live.

Submit request

What happens next (in production)

- You receive an acknowledgement with a link to the plan you chose.
- An invoice is issued; access opens when it is settled.
- Your branding is applied on request for Professional and Enterprise.

Not ready to choose?

Open the full kit first — every form is printable and the take-off sheet calculates, so you can judge the output before paying anything.
